# About the job

Devoteam has been an international leader in consulting in digital strategy, technology platforms, cybersecurity and digital business transformation for 27 years.

With more than 11,000 employees around the world, we imagine and realize their ambitions thanks to the infinite possibilities given by digital platforms, shaping a new culture and way of working.

We are present in 25 countries, putting "Technology at the service of Man" in order to build a more sustainable world.

Devoteam Tunisie, a subsidiary of Devoteam Group, has been generating value for over 13 years. Working on both the African and international scales, our team consists of over 100 multidisciplinary consultants (consultants in digital transformation, developers, project managers, data and cyber security experts) working on enriching and innovative projects.

Job Description

We are seeking our next talents to work on data-related projects (at Strategy, Business, and Operations levels).

The ideal candidate will have a deep understanding of data analysis, management, and visualization, coupled with strong problem-solving and communication skills.

The Data Consultant will collaborate with clients and internal teams to assess data needs, develop strategies for effective data utilization, and implement solutions that drive business insights.

Responsibilities:

- Analyze complex datasets to identify trends, patterns, and insights.
- Interpret data to provide actionable recommendations for business improvement.
- Work closely with clients to understand their business goals and data requirements.
- Collaborate on the development of data strategies aligned with client objectives.
- Design and implement data management processes to ensure data accuracy, completeness, and security.
- Develop and maintain data documentation and metadata.

- Create visually appealing and insightful reports and dashboards.
- Communicate data findings effectively to both technical and non-technical stakeholders.
- Identify and resolve data-related issues and challenges.
- Propose innovative solutions to improve data processes and systems.
- Stay updated on industry trends and advancements in data technologies.
- Provide guidance on the selection and implementation of data tools and technologies.
